Pharmaceutical raw material

Isopropyl alcohol (isopropanol)

Process solvents

CAS 67-63-0

Material illustration

Substance identity

A secondary alcohol miscible with water. The identifiers below describe pure isopropanol. Aqueous blends also require a stated concentration.

Property	Reference value	Method or source
CAS number	**67-63-0**	PubChem
Chemical formula	**C_3H_8O**	PubChem
Molar mass	**60.10 g/mol**	PubChem

For acceptance, check the agreed specification and the certificate of analysis (COA) for the delivered lot.

Applications

A water-miscible process solvent also used in qualified equipment-cleaning procedures. Buying concentrated alcohol or a ready-to-use aqueous solution gives different starting compositions for the same operation.

Purchasing criteria

Specify strength by mass or by volume, the permitted water content and the limit for non-volatile residue. For a closed transfer system, identify the required container and discharge connection.
